

Symbol Function !TIMN, ?TIMN

The symbol function TIMN allows to use 'constant' time values in multiple timestamp replacements.

This subsection covers the following topics:

- Syntax
 - Examples
 - Function
 - Return Format
 - Parameters
 - Reference Objects
-

Syntax

§ !TIMN<parm1>

Examples

§ !TIMN<A>

and

§ ?TIMN

Function

The symbol function TIMN allows you to use 'constant' time values in multiple timestamp replacements.

Return Format

A time stamp, in the format of the Natural system variable *TIMN:

```
Format: A7
Content: HHIISS.T
```

where T = tenths of seconds.

Parameters

Parameter	Explanation
parm1	The parameter is a dummy. But note that all invokings with the same parameter create the same time value (if the same active symbol table is being used).

Reference Objects

None.
